

Semen Production Form

Semen samples must be collected by masturbation into a sterile, 4.5 ounce, screw-cap, wide-mouthed specimen container. This can be obtained from Island Fertility or any pharmacy. Samples must be collected using masturbation unless you have already obtained a semen collection device with instructions from our office. Intercourse without a semen collection device is prohibited. Condoms should not be used to collect the sample, as they are usually spermicidal. **Specimens will not be accepted for diagnostic semen analysis without 2-7 days prior abstinence, you will have to reschedule.**

1. **Print your first and last name and time of collection on the collection container label.**
2. Open the sterile specimen container, breaking the sterile seal, and place the lid upside down.
3. Wash hands thoroughly.
4. Rinse the head of the penis, foreskin retracted, with water.
5. Do not use soap or water as a lubricant; only sterile mineral oil (which we will provide upon request) may be used.
6. Ejaculate into the specimen cup without touching the interior.
7. Replace the lid and close tightly.
8. Wash hands.
9. Fill out the Semen Production Form.
10. Carry the specimen and the completed form to the Andrology Laboratory Drop Off Window. **Samples will not be accepted without government issued photo ID. Unattended specimens will be discarded.**

Male Name:		DOB:	
Male Signature:			
Female Name:		DOB:	
Purpose of today's visit to the laboratory (circle all that apply):			
Process for insemination		Process for IVF	Analysis
		Cryopreservation
